SUMMARY

I'm an AI and Embedded Systems student who likes building practical systems that combine software and hardware. I've worked on projects involving machine learning, IoT, and LLM-based applications, and I'm especially interested in real-time and edge-based solutions. I enjoy figuring out how to turn ideas into working systems.

PROJECTS

AI-Powered Embedded Microscope System (In Progress)

Technologies: Raspberry Pi, Coral TPU, YOLO, CNN

- Built an AI microscope for real-time plankton detection.
- Designed an image processing pipeline with offline support.

GeoAI — AI Misinformation Detection Platform

Technologies: Python, FastAPI, LLM APIs

- Built a web app to verify claims using AI.
- Generated structured outputs with basic analytics.

IoT-Based Cricket Coaching System

Technologies: ESP32, IMU Sensors

- Built a motion analysis system using sensor data.
- Converted data into posture metrics with feedback.

IoT-Based Aerator System for Aquaculture

Technologies: ESP32, Sensors

- Built a multi-ESP32 system for water quality monitoring.
- Sent real-time updates; presented at EDII.

EDUCATION

Vel Tech University – Chennai, Tamilnadu, India
B.Tech – Artificial intelligence & Machine Learning
2024 – 2028

Narayana – Machilipatnam, Andhra Pradesh, India
Intermediate(11th & 12th) – MPC
2022 – 2024

TECHNICAL SKILLS

C, Python, Java (basics)

CNN, YOLO (basic), RAG, LLM
Integration

Embedded Systems

FastAPI, Git, VS Code

Data Structures, Embedded
System Design (basic)

ACHIEVEMENTS

- 3rd Place – ProtoBliz Hackathon

• Presented aerator and
microscope projects at EDII

• Participated in multiple
hackathons (AI, IoT, Web)

• Top 5 – UI/UX Design
Competition (Drycads)

• Top 5 – AYUGEN Project
Presentation

• Presented IoT-based aerator
project at EDII and got Funding.

LANGUAGES

English (Fluent)

Telugu (Native)

Hindi (Basic)

Tamil (Understanding)

Japanese (Basic,)
